Caution : Research conducted at time of extraordinary volatility; all contests fluid, combustible

Colorado's Once Coveted 9 Electoral Votes Appear Out of GOP's Reach in 2020, 26 Days Till Votes Are Counted; Democrat Biden Up by 10 Points; Democrat Hickenlooper Poised to Flip GOP Gardner's US Senate Seat; Proposition 113 and 115 Deadlocked; Proposition 118 Positioned to Pass:

Colorado voters are not rallying around President Donald J. Trump as a result of his emergency weekend hospitalization, fresh SurveyUSA polling conducted exclusively for KUSA-TV in Denver reveals. In interviews completed after last week's Presidential debate in Cleveland, Biden led Trump by 9 points in interviews before Trump's COVID diagnosis and hospitalization. Biden leads by 10 points in interviews conducted after Trump's hospitalization and conquering hero's return to the White House.

At this hour the contest stands: Biden 50%, Trump 40%. Trump's repeated attempts to court suburban women by telling them that suburbia will cease to exist in a Biden administration do not appear to be playing well. Biden today leads by 23 points among suburban women.

While Trump holds 89% of his Republican base --- just 7% of Republicans cross-over and vote for Democrat Biden --- pivotal Independents break for Biden 5:3. Trump leads in greater Colorado Springs by 9 points, runs effectively even with Biden in Western CO, but trails Biden by 21 points in Metropolitan Denver, where more than half of the state's voters live.

Asked which of 4 issues was most important in 2020, half of Coloradans pick the economy. Of those focused on the economy, Trump leads Biden narrowly, 48% to 42%. About 1 in 5 voters say that "law and order" is the most important issue and another 1 in 5 voters say "social justice" is the most important issue. Of those preoccupied with law and order, Trump leads 70% to 23%. Of those focused on social justice, Biden leads 83% to 10%. Just 1 in 20 voters say energy is the most important issue, and energy voters overwhelmingly back Biden, 7:1.

58% of likely voters disapprove of President Trump's response to the Coronavirus. By contrast, 61% of likely voters approve of Colorado Governor Jared Polis' response to Coronavirus.

Mitch McConnell is in trouble if he is counting on Republican Cory Gardner's re-election to the US Senate to help cement McConnell's GOP Senate Majority. **Gardner** today trails former Colorado Governor and former Presidential candidate John **Hickenlooper** 48% to 39%. Hickenlooper and Gardner run effectively even among the state's white voters. Hickenlooper's advantage comes predominantly from Hispanic voters, where he leads by 27 points.

Of those voting for Republican Trump at the top of the ticket, 83% stay with Gardner down-ballot. By contrast, of those voting for Biden, 88% stick with Democrat Hickenlooper. Hickenlooper leads by 15 points among independent voters and leads by 19 points among moderates. In suburban households, the Gender Gap is 32 points: Gardner leads by 13 points among suburban men. Hickenlooper leads by 19 points among suburban women.

Colorado voters are split on statewide **Proposition 115** , which would outlaw abortions after 22 weeks. 42% support 115, 45% oppose. 77% of those who identify as "very conservative" back 115. 76% of those who identify as "very liberal" oppose 115.

Colorado voters are split on statewide **Proposition 113** , which is part of a compact that would award Colorado's electoral votes to the winner of the popular vote. 39% today vote Yes on 113, 38% vote No. 59% of Democrats support. 59% of Republicans oppose.

Statewide **Proposition 118** , which would use a payroll tax to underwrite 12 weeks of paid leave for family or medical reasons, leads by 36 points today, 57% to 21%. 118 is backed by men and women, young and old, rich and poor.

Voters are not focused at all on statewide **Amendment B** , which repeals the Gallagher Amendment. 61% of likely voters tell SurveyUSA they are not certain how they will vote on B. Of the minority of voters who have an opinion, 22% vote Yes, 17% vote No. Any outcome is possible.

About : SurveyUSA interviewed 1,300 adults statewide 10/01/2020 through 10/06/2020. Of the adults, 1,109 are registered to vote in Colorado. Of the registered voters, SurveyUSA identified 1,021 voters likely to return a ballot on or before the 11/03/2020 deadline. This research was conducted online among a representative cross section of Colorado adults. Respondents were weighted to US Census targets for gender, age, race, education, and home-ownership. In 2016, Hillary Clinton carried Colorado by 5 percentage points. In 2020, multiple overlapping forces are at work to limit the predictive value of public opinion polls. The manner, timing, and way in which many voters will mark a ballot in 2020 will differ from previous elections. Whether this makes turnout higher than anticipated, lower than anticipated or unchanged is unknowable. Whether there will be systemic voter fraud, as the President fears, or isolated and insignificant fraud, is unknowable. Whether there will be a smooth transition of power is unknowable. As such, this research provides rich and remarkable insight into the state of play in Colorado at this hour, but may or may not correlate to what "will be" in 26 days.

18 Last, on Proposition 118, the Paid Medical and Family Leave Insurance Program. Proposition 118 would allow for 12 weeks of paid leave for family or medical reasons, with additional time off for pregnancy or childbirth complications. The program would be funded through a payroll tax paid by half by employers and half by employees. On Proposition 118, are you ...?

** Too few respondents of this type were interviewed for this data to be meaningful.

Statement of Methodology: SurveyUSA is an independent, non-partisan, apolitical research company that conducts opinion surveys for media, academic institutions, commercial clients, non-profits, governments, agencies, and elected officials. SurveyUSA opinion research is conducted using a methodology optimized for each particular project. In some cases, this means data is collected 100% by telephone; in some cases, 100% online; and in other cases, a blend of the two. For those projects that are conducted “mixed-mode” (or “multi-mode”): Respondents who have a home (landline) telephone are interviewed by phone, sometimes using live interviewers, other times using the recorded voice of a professional announcer. The youngest male is requested on approximately 30% of calls to home phones, the youngest adult is requested on approximately 70% of calls. This method of intra-household selection reduces the potential for age and gender imbalance in the unweighted sample. Re-attempts are made to busy signals, no-answers, and answering machines. Landline telephone sample is purchased from Aristotle of Washington DC. Respondents who do not use a home telephone are interviewed on an electronic device, which means, for some projects, that call-center employees hand-dial cell phones and interview respondents verbally on the respondent’s cell phone, and means, for other projects, that SurveyUSA displays the questions visually on the respondent’s phone, tablet, or other device. Sample for respondents who do not use a home telephone is purchased from Aristotle or from one of several other research companies that provide access to cell respondents. Where meaningful, SurveyUSA indicates the percentage of respondents who use a home phone and the percentage who do not, and crosstabs by this distinction. Responses are minimally weighted to U.S. Census or voter file targets for gender, age and race. Target (cell) weighting is used. On questionnaires that ask about political party identification, SurveyUSA may or may not weight to Party ID, depending on client preference. Where necessary, questions and answer choices are rotated to prevent order bias, recency, and latency effects. On some studies, certain populations are over-sampled, so that the number of unweighted respondents exceeds the number of weighted respondents. Each individual SurveyUSA release contains the date(s) on which interviews are conducted and a release date. If interviewing for a particular study is conducted in Spanish, or in any other foreign language, it will be noted on the specific release. If no notation appears, interviews are conducted in English. Where respondents are filtered, such as adults, filtered to registered voters, in turn filtered to likely voters, SurveyUSA describes the filtering on the specific release. On pre-election polls in geographies with early voting, SurveyUSA differentiates between respondents who have already voted and those who are likely to vote but have not yet done so. On research completed prior to 12/31/16, SurveyUSA assigned to each question within the instrument a theoretical margin of sampling error. Effective 01/01/17, SurveyUSA assigns to each question within the instrument a credibility interval, which better reflects the sampling uncertainties associated with gathering some percentage of respondent answers using non-probability sample. Though commonly cited in the presentation of research results, “sampling error” is only one of many types of error that may influence the outcome of an opinion research study. More practical concerns include the way in which questions are worded and ordered, the inability to contact some, the refusal of others to be interviewed, and the difficulty of translating each questionnaire into all possible languages and dialects. Non-sampling errors cannot be quantified. This statement conforms to the principles of disclosure as recommended by the National Council on Public Polls (NCPP). Questions about SurveyUSA research can be addressed to editor@surveyusa.com.
